

George Bibu API Test Report

Created a test named APITest to:

POST - create a user with username and password passed in the request body, successful response generates a 201 status code with UUID and username.

POST - Token is created by passing username and password in the request body. Successful request returns 200 status code along with token and “Success” status.

GET – list of books for a user is returned by passing token in the header as authorization. Request body is empty, response contains list of book details upon success.

The screenshot displays the GitHub Actions interface for a workflow named "UI and API Automation Final". The specific job shown is "API Test #8", which has failed. The left sidebar contains a "Summary" section with a list of jobs: "UI Tests" (passed) and "API Tests" (failed). The main panel shows the "API Tests" job details, including a search bar and a list of steps. The "Setup Gradle" step is expanded, showing the following log output:

```
36 Gradle distribution 8.14 not found in cache. Will download.
37 Downloaded https://services.gradle.org/distributions/gradle-8.14-bin.zip to /home/runner/work/_temp/.gradle-
38 actions/gradle-installations/downloads/gradle-8.14-bin.zip (size 137391539)
39 /usr/bin/unzip -o -q /home/runner/work/_temp/.gradle-actions/gradle-installations/downloads/gradle-8.14-bin.zip
40 Extracted Gradle 8.14 to /home/runner/work/_temp/.gradle-actions/gradle-installations/installs/gradle-8.14
41 Provisioned Gradle executable /home/runner/work/_temp/.gradle-actions/gradle-installations/installs/gradle-8.14/bin/gradle
